Trumpf 5030 Fiber Laser

Doncaster Laser Services continue to go from strength to strength with their purchase of a Trumpf 5030 fiber laser.

This impressive machine is a powerhouse for any company's production requirements.

With cutting speeds up to three times faster than a Co2 laser, this machine was the obvious choice to move Doncaster Laser further into being one of the UK's more prominent laser profilers .

The machine boasts an impressive 3000 x 1500 bed size and can cut with ease from the thinnest of steels upto 20mm in stainless steels, 12mm in aluminium and 25mm in carbon steels.

Additionally cutting of copper and brass is now available.

Call us today with your project needs to see how we can assist you.
